3M™ Window Films–Prestige Series
Putting your home in a better light.

A new standard of performance metallic films can't match.

Until recently, most window films that rejected heat were tinted dark, used metal or were highly reflective. The Prestige Series are the first films to offer a variety of selections that perform to the industry's highest standards.

With Prestige Series, your home's exterior stays beautiful, and from the interior, your view is as clear as your original window.

Dealers who are also clearly superior.

There are thousands of window film dealers in the country, but only a select few have been chosen to be part of our Prestige Dealer network. They were selected because of their ability to offer quality work, their extensive product knowledge and their ability to serve their customers to the highest standards.

Another great 3M product you can trust.

No one has more experience with window films than 3M. In 1966, we received the first patent for window film. Today there are millions of square feet of 3M Window Films installed all around the world. With these films, we have once again demonstrated why we are the industry leader.

Put your trust in 3M Window Films.

Contact your local representative from our Prestige Dealer network for a free estimate. For more information, please call 1-866-499-8857 or visit us at www.3m.com/prestige.

3M

The Skin Cancer Foundation recommends many 3M Window Film products as effective UV protectants.

Window Films

3M™ Window Films

Clearly Superior Window Films.

prestige window films

Reflectivity that's actually lower than glass.

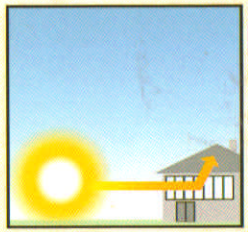
Unlike traditional window films that tend to act like mirrors, this collection of four window films have substantially reduced reflectivity. Two of our styles of window films actually have less interior reflectivity than the glass they cover. The other styles have interior reflectivity that is just 1% greater than glass. So, at night, you'll have a clear view out your windows. Your windows will only reflect your commitment to keeping your home looking beautiful.

Superior heat rejection throughout the day.

For most people, there are two primary reasons for installing window films: rejecting heat to increase comfort and fade protection from damaging UV rays. Our spectrally-selective films reject up to 97% of the sun's infrared light to help keep your home cool, your energy bills lower and your furnishings beautiful.

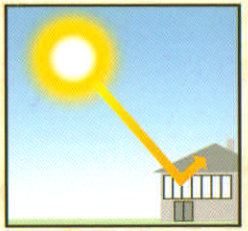
Total Solar Energy Rejected–On Angle

Other Brands



All window films are tested perpendicular to the window.

3M



Prestige Series Films are also tested and perform best when the sun is high at the hottest parts of the day.

prestige window films

We created a more stringent specification for the performance of these films: Total Solar Energy Rejected – On Angle. It proves that our films are unsurpassed throughout the day and especially during the hottest times when you need the help most. Some films that may claim similar performance are only comparable when tested perpendicular to the sun, which only happens at the relatively cool times of sunrise and sunset. So, when the sun is working hardest, our films are performing their best.

3M Prestige Window Films are designed to reduce the effects of solar heat and visible light on your furnishings and will block up to 99.9% of the sun's harmful UV rays, which are the single largest cause of fading.

Optically clear. Technically superior.

Creating a clear window film with all these advantages wasn't easy. It required the world-leading, nano-technology laboratories of 3M. This expertise allows us to create a patented window film with hundreds of layers that is less than the thickness of a Post-it® Note. It has allowed us to create a film that delivers the highest performance possible without metal, which can corrode and interfere with mobile phone signals.
